

Figure 1 consists of seven subplots, labeled (a) through (g), each showing a histogram of the number of non-zero elements in the vector  $x$  for a specific value of  $n$ . The subplots are arranged vertically. The x-axis for all plots is 'Number of non-zero elements' with major ticks at 0, 20, 40, 60, 80, and 100. The y-axis is 'Frequency' with major ticks at 0, 2, 4, 6, 8, and 10. The subplots correspond to  $n = 10, 20, 30, 40, 50, 60, 70$  respectively. As  $n$  increases, the distribution of non-zero elements becomes more concentrated around 50.
